OBJECTIVE

Frontend Developer with 1.5+ year of experience building scalable, performance-optimized web applications using React.js, Next.js, Remix, and TypeScript. Strong in component-based architecture, responsive design, REST API integration, and UI performance optimization. Experienced working in Agile teams to deliver user-focused products.

SKILLS

- **Programming Languages:** JavaScript (ES6+), TypeScript, HTML, CSS
- **Web Technologies:** React.js, Next.js, Remix.run, Tailwind CSS, REST API, Node.js, Express.js
- **Database Systems :** MongoDB, Mongoose
- **State Management :** Zustand, Context API, Custom hooks.
- **Tools & Workflows:** Git, GitHub, Postman, Vercel, Figma, Framer Motion, Mantine,.

EXPERIENCE

• Quvor

June 25 - December 25

Frontend Engineer

Remote, India

1. Developed and optimized complex **cart and wishlist flows**, including dynamic product handling for both logged-in and guest users using **Directus**.
2. Built responsive, modular UIs (Landing Pages, Product Listings, Plan Comparison, Modals) using **Remix.run, Zustand, and Mantine UI**, improving user experience across devices.
3. Refactored business-critical logic into reusable **custom hooks**, implemented **caching strategies**, and collaborated on feature specs to align with company architecture and revenue models.

• DU Buddy

February 25 - June 25

Frontend Engineer

Delhi, India

1. Created a flexible promotional feature system with customizable discount coupons for educational courses, supporting time-limited offers that increased course purchases and user conversion rates.
2. Integrated dynamic video components and interactive sliders on the company's main website, showcasing educational content and promotional offers that increased **visitor engagement by 40%**
3. Revamped the payment screen interface with enhanced visual elements and streamlined checkout flow, resulting in a **25% reduction in cart abandonment** and significantly improved user satisfaction metrics.

• Lean Platform Technologies

March 24 - January 25

Frontend Engineer

Delhi, India

1. Built a **dynamic website builder**, allowing users to create **multi-page websites with custom themes**, dynamic routing, lead forms, and lazy loading, **boosting page speed by 34%**.
2. Integrated SEO functionalities and third-party tools like Crisp, Clarity, Facebook, and LinkedIn, improving **user engagement by 22%**.
3. Optimized platform performance by implementing state management techniques and using modern asset formats (WebP, AVIF), **reducing loading time by 8%**.

PROJECTS

• Lingo(AI English Tutor) - Interactive English Learning Platform

[GitHub](#)

Personal Project

- Developed a **Next.js + TypeScript** English learning platform with **AI-powered chat, roleplays, debates**, and **character** conversations to enhance real-world communication skills.
- Integrated **Google OAuth authentication**, **onboarding survey**, and **personalized learning plans** to tailor content to each user's goals and skill level.

EDUCATION

The Indira Gandhi National Open University: Bachelor of Computer Applications
